

## FINISHING WAX

This finishing wax available from Compagnie des Ocres is a craft wax made in Avignon from natural products.

This preparation creates bright finishes on a variety of different surfaces.

It is particularly recommended for application on saponified wax in high passage areas or wet rooms.

**Preparation :** Product is ready for use.

**Application :** Apply with a wide sponge. The appearance after application is a satin lustre, becoming very bright after polishing. This can be done either using a soft cloth, a sheepskin polisher, or with a dry mop.

Do not wait too long before buffing.

It's recommended that a small area is tested first to ensure that the polished area is free from streaks. A second application may be used for a deeper and more water resistant coating.

**Coverage:** 1 litre for about 6m<sup>2</sup>.

**Cleaning :** Wash tools with soap and water immediately after use.

**Qualities :** Dries within 24 hours and is almost odourless.  
Wipes clean with a damp sponge and a mild detergent.  
Can be used in wet or very humid rooms.

**Hints :** Retains a satin finish if you do not polish it.

**Refer to the proposed books for further information.**
